## TOUCHSCREEN

The new 485 series features the option of a 3 inch, full color touch display. The touch screen gives the user capabilities to change printer settings "on the fly" and provides real time status monitoring.

This grants flexibility and accuracy in print jobs for changes that sporadically arise.

RFID

Microcom is excited to introduce RFID technology into our newest 485 ticket printer series. These printers can print and encode tags while detecting faulty inlays then print "VOID" across the tag. The ticket path has been upgraded to handle up to 24 mil thick stock.

The 485 RFID series supports HF/NFC tags compatible with ISO 14443 and ISO 15693.
